Accessibility Checker: Is Your Website Accessible?

With EXPERTE.com's Accessibility Checker, you can find out how accessible your website is. The tool crawls your site, making sure that each subpage can be correctly displayed by screen readers, allowing even blind and visually-impaired users to make full use of it.

The accessibility test assesses 41 features across eight categories. The most important categories are:

Navigation

Our test checks whether the site's navigation is consistent and accessible.

ARIA

ARIA is a semantic HTML extension that makes websites more accessible for those with disabilities. Our test checks whether ARIA has been correctly

implemented.

Names and labels

Among other things, our test also checks whether form fields and buttons are marked with meaningful labels, and if images have alternative text.

Contrast

For a significant number of users, text with low contrast is difficult or impossible to read. Our test checks whether the **contrast ratio** between

background and foreground colors is sufficient.

Tables and lists

Screen readers offer functions that make navigating tables and lists much easier. We check whether these have been implemented correctly.

Audio & Video

If a video contains subtitles, those with hearing impairments users can better understand its content. This test checks if there are correct markups.

Internationalization & Localization

When you specify a valid language on your site, screen readers can correctly display text. Our test checks whether a valid language has been specified.
